

TAM 2L

TAM, is the ultimate fixed-frame A.T. screen with motorised masks. Your image is optimum when perfectly framed by light-absorbing black borders.

In order to achieve this exact framing for various imaging Aspects Ratios, the True Aspect Masking L offers LATERAL masking. The height of the viewing area remains constant, whereas the width can vary according to the required aspect ratio.

This provides a projection surface constantly and accurately bordered with black edges, enhancing the contrast and a real focus on the image.

CONSTANT HEIGHT, VARIABLE WIDTH

The TAM-2L is a constant height design provided with two independent lateral motorized masks. The most common aspect ratios can be pre-programmed in the motors controls.

The frame is the same as with the RF range, hence offering a sleek appearance. The TAM-2 L screen will integrate with your decor seamlessly, allowing, discreetly, a fully automated operation of your Home Theatre.

Technical info:
